"Advancing knowledge of veterinary wound healing"

Wound and surgical site infections in the modern veterinary clinic: prevention and treatment

14th and 15th May 2020
London - UK

Our theme will address problems and questions we all encounter in everyday veterinary practice. Wound infections are caused by bacteria, and infections are prevented and treated with antibiotics.... or are they?

We live in a world where resistant bacteria cause increasing problems. What can we do to both reduce wound infections and the use of antibiotics? Do antibiotics prevent or increase surgical site infection rates? When are bacteria a problem in open wounds? If so, do we need antibiotics, or do we have alternative strategies? Or is it better not to treat bacteria at all?

Join us to learn about the latest developments in the practical approach of wound infections.

Call for abstracts

A research communication session is included in the programme. Abstracts dealing with all aspects of veterinary wounds are invited! Eight abstracts that are selected for an oral presentation receive a free registration for the full EWMA conference! Please submit your abstract using the abstract form (www.vwha.net) to advice@vwha.net (Deadline: March 15th 2020).
